

Putting the spots back in to sport

## **STALLION CLASSIFICATION FORM**

Sportaloosa International welcomes the breeding classification of outstanding individuals that are both worthy to breed and capable of improving the Sportaloosa. Breeding stallions must be clear of hereditary defects and must exhibit structural strength and soundness and a tractable nature.

Please have this form completed and signed by a practising veterinarian, who must also sign the reverse of a photo of the stallion to be classified. Stallions are eligible for upgrade to classified breeding stallions from 1 August of the year in which they turn 2.

Please complete all fields in this form.

Registered name Registration number   Date of birth / / Height   Brand Left Right DNA # Microchip #    Colour & coat pattern  Colour Coat pattern  On inspection of this stallion, I have found: Both testicles are descended  Yes No Both testicles are evenly sized  Yes No The jaw is undershot There are visible signs of heritary unsoundness* Yes No The photo I have signed accurately depicts the horse inspected Yes No Comments	Stallion identification details
